---
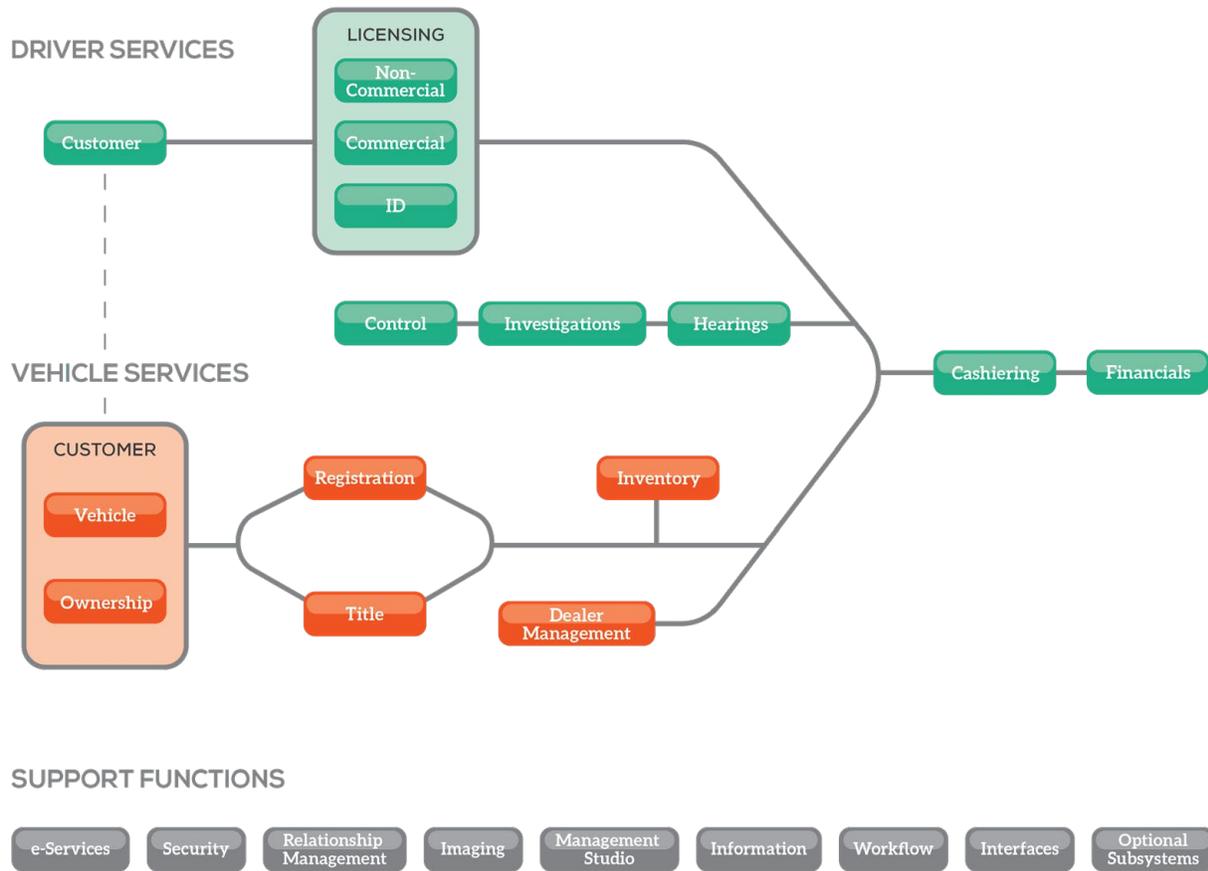

Fast Enterprises' (FAST's) commercial off-the-shelf (COTS) FastDS-VS software is the single-source solution for the administration of driver and vehicle services. It consists of six integrated modules and constituent subsystems that provide motor vehicle agencies with comprehensive features and functionality for the administration of driver licensing and control and vehicle titling and registration programs.

Since FastDS-VS first entered production in 2012, FAST has successfully completed more system-modernization projects for U.S. state driver and motor vehicle agencies than any other vendor. Much of this success is attributable to the highly flexible FastDS-VS software, which is configured—not programmed—to meet the needs of agencies and the jurisdictions they represent. It contains functionality based on best practices that are standard to the regulation of drivers and vehicles yet is implemented to accommodate jurisdiction-specific business rules and technical requirements.

FastDS-VS is browser-based, platform-independent, highly scalable, and compatible with service-oriented architecture. It runs on industry-standard hardware, operating systems, and relational database management systems. While the final configuration of FastDS-VS is unique to each motor vehicle agency, the entire community of FastDS-VS agencies benefits through a common solution that FAST maintains and enhances through routine software updates and release of new versions.

FAST ENTERPRISES

FastDS-VS consists of six integrated modules and component subsystems that are configured to meet the unique requirements of motor vehicle agencies.
